

WHAT IS TEFLON® ADVANCED CARPET PROTECTOR?

Teflon® Advanced Repels Dirt and Stains

It's always a pleasure to see how bright and clean your carpets look right after they've been professionally cleaned. Now you can keep them looking fresh and new longer by asking for Teflon® Advanced Carpet Protector. Teflon® Advanced forms an invisible shield around each fiber, which resists soil and stains.

Teflon® Advanced uses new DuPont technology to provide more repellency than any other carpet protector. It repels most liquids, allowing spills to be removed before staining and wicking can occur. Dirt and stains cling to untreated carpet and quickly become embedded in the fibers. Teflon® Advanced keeps dirt from sticking to the fibers, making carpets easier to care for.

Teflon® Advanced must be professionally applied by your carpet cleaner. It is applied by spray application, dries quickly, and leaves no odor. It is non-toxic and safe to use around family and pets. It's CFC- and solvent-free.

DuPont recommends the application of Teflon® Advanced after each cleaning on all carpet fiber types. Even wool carpets can benefit from DuPont's special formulation for wool carpets. With an application of DuPont Teflon® Advanced Carpet Protector, you have the assurance your carpet is protected with a premium quality product.

The next time you have your carpets professionally cleaned, be sure to ask for Teflon® Advanced Carpet Protector.

Why You Should Have Teflon® Advanced Applied After Cleaning Stop Dirt and Stains in Their Tracks.

Over time the mill-applied carpet protectors can lose their effectiveness. This is due to the fibers being abraded during foot traffic. Although the fluorochemical treatments are very good, it is believed that they need to be replenished after approximately 2 years, especially in high-traffic areas. The fluorochemical applied in the mill can wear off over time, and portions of the fiber can be exposed during abrasion that were not exposed during the mill treatment. The application of Teflon® Advanced after cleaning will ensure that the performance of the fiber will be maintained. We recommend that Teflon® Advanced be applied after every cleaning.

- Forms an invisible shield around each fiber
- Repels liquid spills
- The best soil protection for all types of carpets

- Helps carpets last longer
- Protects your carpet investment
- Helps make carpets easier to care for
- Safe around family and pets

What Teflon® Advanced brings you is protection of your carpet to oil and dry soils:

Untreated

Teflon® Advanced

The piece of carpet on the right has been treated by Teflon® Advanced, the one on the left has not. They were both run through an industry soiling test. The one with Teflon® Advanced looks cleaner. This means that when your carpet becomes soiled you will be able to remove more soil out of your carpet with your vacuum if you have Teflon® Advanced applied after your carpet is cleaned than if you do not. Remember Teflon® Advanced is your first defense!

Don't take any substitutes- Teflon® Advanced is the best product on the market. Ask for it by name and look for cleaners who use Teflon® Advanced.
